

BLOOD PRESSURE AND HEART RATE - WIRELESS

Reference : PS-3218

Blood pressure sensor

No USB or Bluetooth interface

This sensor is a simple and fast way to measure blood pressure and heart rate.

It also allows you to graphically visualise pulses related to the passage of blood in the brachial artery.

The sensor automatically calculates and displays the diastolic and systolic pressures as well as the heart rate.

The results are expressed in mm of mercury for pressures and beats per minute for the heart rate.

Comes with a standard size wrist band, an XL wrist band is also available as an option.
