

DEMINERALISER WITH 2L CARTRIDGE

Reference : DEMIN2

For water at 10° dH (or 5.6° fH) salt content, the cartridge allows the production of around 425 L of demineralised water.

Production of high quality demineralised water.

Ion exchanger for total demineralisation of water, according to DAB10 and EuAB specifications. The configuration includes a conductivity meter, a supply pipe and an outlet pipe (with R 3/4 inch fittings), as well as a wall mounting kit.

The benefits:

- Purification of water at low cost
- Ease of use
- High degree of efficiency
- Blue, light-proof cartridge prevents algae formation
- Production of totally demineralised water directly on the bench

Flow rate: approx. 45 L / hour
Mains voltage: 230 V / 50-60 Hz

Dimensions : 600 x Ø 100 mm
Mass: approx. 3 kg
