

# ETHANOL FUEL CELL

Reference : FCJ-42

New types of profiled blades, from the aeronautics (NASA), allow you to find the right balance according to the wind resistance, the weight and the angle of the blades. Begin by introducing the ethanol and water into the mixing tank and then, using the silicone tube, transfer this solution to the fuel cell where it will be converted into electricity to power a mini-turbine. The future of fuel cell technology is here, under your eyes!
