

EYEWASH STATIONS

References : SMF2, STACOMBI

Resistant PVC eyewash stations for easy and immediate access to care in the event of an accident affecting the eye.

- Good visibility and easy access to emergency care
- Simple assembly (delivered with screws and dowels)
- Immediate and effective eye rinse
- Clear pictograms and mirror
- Suitable for environments with low dust exposure
We propose two different stations according to the risk, they can contain two types of solution:
- Sterile Sodium Chloride Solution for optimal first-aid eye care in the event of splashes of dirt, dust, wood chips or iron filings into the eyes.
- pH Neutral Solution: 4.9% phosphate buffer that quickly and effectively neutralises all acids and alkalis. Very quickly returns the pH of the eye to a normal value of 7.4 and reduces the severity of a chemical lesion.

Combi station
