

# GEOLOGICAL MAP OF EUROPE

PRODUCT SHEET

Reference : CGEPLI

1 folded sheet

1/5,000,000 map

This geological map covers Europe and extends to the north and west, covering a large part of the North Atlantic, Greenland, and the European Arctic (Barents Sea) and Siberian West (sea of Kara) continental plateau; to the south, it extends from the Canaries and southern Morocco to the bottom of the Persian Gulf. It therefore includes all of the inland seas: Mediterranean Sea, Black Sea and Caspian Sea. Geological information is no longer confined to land only, and now extends to the entire seabed, which accounts for nearly 60% of the map surface.

Conic Lambert projection

Dimensions of the map: 167 x 127 cm
