

HYDROGEN CAR

Reference : NRJCAR

This vehicle, delivered with a photovoltaic cell, includes a fuel cell and an electrolyser. Electrolysis is done using solar energy or an external power supply. The formation of oxygen and hydrogen is visible in two water tanks. When the car hits an obstacle, it changes direction without outside intervention. This kit combines fun science with cutting-edge science.

Composition :

- Car (to be assembled)
- Reversible fuel cell
- Tanks for hydrogen and oxygen
- Photovoltaic cell
- Power supply (2 R6 batteries required, not included)
- Connection cords and mounting accessories
