

# KIT NO. 6: SCARLET EBONY X WILD SHORT DISTANCE BETWEEN GENES

References : 101/K6, KITBC/K6

## Les mutations et leurs effets phénotypiques

In order to study intrachromosomal and interchromosomal mixing, different kits are proposed depending on the location of genes involved in different visual phenotypes.

### Composition :

The kits consist of 12 cross tubes made by us, 40 to 100 flies will develop in each of them.  
Each kit comes in two versions:

#### Classic version:

- 1 tube from each parent
- 2 F1 generation tubes
- 5 F2 generation tubes
- 3 Back-Cross tubes

#### Back-Cross Version:

- 1 tube from each parent
- 2 F1 generation tubes

- 8 back-cross / test-cross tubes

Back-Cross Kit

**Drosophila is a great pedagogical tool for awakening the interest of all students.  
Do not miss it!**
