

LED BULB E27, 16 COLOURS WITH REMOTE CONTROL

Reference : NRJCOUL

The remote control can turn on, turn off, change the colour and change the light intensity remotely

This bulb makes it easy to study the influence of wavelength on photosynthetic intensity. It is compatible with all lamps with E27 socket.

The remote control turns the light on and off and adjusts the wavelength and light intensity. It provides a powerful and effective light source. It makes it possible to optimise the photosynthesis experiments in data logging.

The cold light avoids temperature variations in the unit, which often leads to measurement errors.

Bulb 3W with E27 socket

Scope: 2.50 meters

- 4 main colours (blue, green, red, white light)
- Cold light
- Intensity adjustment
- ON / OFF button
- Remote and battery provided
