

PROMECA STATICS SET

Reference : PROMECA

Set of products on magnet grouped in a briefcase to perform the majority of statics experiments. Visible from a distance, the elements are quickly mounted thanks to their magnetic base. The storage case provided allows you to quickly see if there are missing items at the end of the lab session.

Composition:

- 1 momentum disk on magnet with a set of pins and a coil of wire
- 1 metal lever with 15 equidistant holes with its axis on a magnet
- Set of magnetic accessories (4 pulleys, 2 hooks, 1 ruler)
- 2 2N dial dynamometers on magnetic media
- 4 load cells (2N - 5N) on magnetic supports
- 1 set of 12 hook masses (50 g, 100 g, 200 g)
- 1 inclined plane and its pulley
- 3 springs of different stiffness with their magnetic calibration scale
- 2 erasable markers
- 3 arrows and 2 magnetic triangles

All these elements are presented in a protective storage case.
Dimensions: 500 x 400 x 130
Total mass: 4.860 Kg
