

REMOTE CONTROLLED HYDROGEN CAR

PRODUCT SHEET

Reference : FCJJ-23

Experience the automotive technology of the future by assembling and driving your own hydrogen fuel cell car. The car and the hydrogen station are equipped with transparent shells and LED lights allowing you to observe the electrolysis reaction and the electrical conversion of hydrogen. The H-Racer 2.0 model replicates the mode of supply of full-size hybrid vehicles in all its simplicity. A good introduction to the networks of hydrogen distribution stations that are being built across Europe and the United States.
