## 2 types of riders, 2 philosophies

### Flat rider

Rigid plastic rider allowing the use of ultrasonic transmitters and receivers on a single working table along a ruler, for example.

Two fixing clips hold the transmitter or receiver firmly at a height of 100 mm from the table, thus avoiding reflections on the worktop.

**Réf : USONCAV1**

### Rider on rod

Stand composed of a tray on a rod: Ø 10 mm. Two fixing clips make it possible to perfectly hold an ultrasonic transmitter or receiver.

This device allows use on any type of optical bench with column riders.

Length of the rod: About 90 mm
