

Reference : PS-2011

Connect the sensor of your choice and connect the interface via Bluetooth to the computer work station (a computer interface).

Wireless interfaces are ideal for the teaching position or outdoor measurements.

With a range of 10 meters, it is now very easy to circulate the sensor between students without moving them and video project the measurements in real time on the white board.

The Sparklink Air wireless interface has two ports for connecting one to two sensors.

Two additional ports are dedicated for temperature and voltage measurements (probes provided). Two additional ports are dedicated for temperature and voltage measurements (probes provided).

Properties:

- Rechargeable lithium battery (charger supplied).
- Compatible: Iphone, Ipad, Android smartphones and tablets, Windows, IOS.
