STRAINS

References : CMS/BMEGA., CMS/ECOLI., CMS/HALO

Bacillus megaterium, GRAM +, large bacillus (5 to 10µm) tendency to filament
GRAM + bacteria, large bacilli (5 to 10µm) tendency to filament
Réf : CMS/BMEGA.

Escherichia coli
GRAM- bacteria, wild strain, bacillus (1 to 2µm)
Réf : CMS/ECOLI.

Halobacterium salinarum
This bacterium grows in a very salty environment, it is ideal for the introduction to microbiology because its culture medium does not allow the development of other micro organisms.
Réf : CMS/HALO
