

# THERMOCLINE (TEMPERATURE / DEPTH)

Reference : PS-2151

This sensor makes it possible to directly measure the temperature according to depth. The depth measurement is measured directly by our sensor, no calibration is necessary. The weighted head allows a stable measurement.

Technical characteristics:

- from 0 to 10.5m depth  $\pm 0.15$ m
- from 0 to 70° C  $\pm 1.5^\circ$  C
- Resolution: 0.03 m
