

THERMOCOUPLE - TYPE K

Reference : PS-2134

This temperature sensor is equipped with a type K thermocouple probe which allows the measurement of low and high temperatures.

The sensor is covered by a Teflon coating, which protects it from chemical attack.

Common applications:

- Temperature of a candle flame
- Very low temperature measurements (up to -200°C) eg for liquid nitrogen.

Technical characteristics:

- Measurement: from -200°C to 1000°C
- Units: $^{\circ}\text{C}$, $^{\circ}\text{F}$ and K
