

WEBCAM HOLDER FOR FLAT ABS SPECTROSCOPE

Reference : SPECAM

The camera stand for the flat ABS spectroscope simply slides over the spectroscope. It is equipped on the side with a device allowing to fix everything on a \varnothing 10-13mm rod stand and easily point the slot of the spectroscope towards the light source to be observed.

Then simply insert the webcam (reference HDCM) in the hole in front of the network and tighten the fixing screw on the top to view the spectra.
